Bowden & Ball Ringing Partnership Report – 2024

Introduction

This is the 13th annual report that has been produced by the Bowden and Ball Ringing Partnership. This annual report is intended to give a brief indication of the activities and some of the results of the following 'members'. Most ringing is undertaken in Lincolnshire, though some of our regular owl box schemes are just over the border into neighbouring counties. In addition Steve Biglands moved to Northumberland when he retired, so his ringing is carried out up there. Daniel now lives and works in Suffolk. Also Andrew Chick still lives near Windermere, so his ringing activities were carried out in Cumbria in 2024.

Brian Leonard , who has been with the group since that start, 'retired' from ringing at the end of 2023, so we are left with the following 'members'.

Name	Permit no		Name	Permit no
Alan Ball	A2544		Daniel Wade	A5842
Bob Sheppard	C2932		Garry Steele	C5857
Steve Biglands	C3948		Jack Dawson	C6640
Andrew Chick	C4074		Ian Willoughby	C7020
Keith Bowden	A4168			

The number of birds processed by group members in 2024 is shown below. Note that this does not necessarily demonstrate ringing effort as, for instance, when Bob and Alan go ringing together, Alan normally does the ringing and Bob the scribing. In addition, the table only includes those birds that are ringed using the Partnership's rings, so again does not indicate individuals total effort during the year, such as Daniel who ringed birds with the Kessinglang RG in Suffolk.

2024 Observer Ringing Totals				
Observer	Full grown	Pulli	Retraps	Total
Alan Ball (AB)	4318	571	643	5532
Keith Bowden (KB)	0	3	0	3
Bob Sheppard (RS)	31	152	17	200
Steve Biglands (SB)	133	0	26	159
Andrew Chick (AC)	32	203	0	235
Brian Leonard (BL)	5	0	0	5
Daniel Wade (DW)	29	0	4	33
Garry Steele (GS)	0	14	0	14
Jack Dawson (JD)	6	2	0	8
Ian Willoughby (IW)	20	151	7	178
Owen Beaumont	2	14	0	16
Others	4	10	7	21
Total	4580	1120	704	6404

2024 Site Capture Totals

The following table contains those sites where over 50 birds were processed in 2024.

	2024 Site Totals	Adults Ringed	Pulli Ringed	Total Ringed	Retraps/Controls	Total Birds	No of Species
1	Bourne Wood	2303	1	2304	374	2678	28
2	Marston STW	1247	3	1250	145	1395	38
3	Dunsby Fen	225	0	225	11	236	15
4	Dunsby STW	205	0	205	28	233	20
5	Fenwick (SB's garden)	133	0	133	26	159	18
6	Colthouse Heights (Cumbria)	5	133	138	0	138	3
7	Deeping Lakes	89	0	89	5	94	1
8	Northorpe Fen	78	9	87	6	93	9
9	Spring Wood (Cumbria)	3	63	66	0	66	3
10	Anderby Creek	55	0	55	3	58	15
11	Pasture Hill Farm	55	0	55	0	55	1
** Other sites (327 no.)		182	911	993	106	1099	
	Total	4580	1120	5700	704	6404	68

Note ** High number of 'other' sites is due to isolated nest-boxes spread throughout Lincolnshire and adjacent counties, where just a few chicks and/or up to two adults are normally ringed.

An unexpected Firecrest during the last session of the year – Dunsby 29th December 2024

Over 700 Siskins were ringed at Bourne Wood during Feb to April – above female (L) male (R)

Italian-ringed Siskin – 18th March – Bourne Wood

Latvian-ringed Siskin 24th March – Bourne Wood

Nest Records 2024

Group members managed to contribute a total of 439 Nest Record Cards of thirteen species to the BTO Nest Record Scheme, including over 400 for birds of prey, as shown in the table below. As usual, the majority were as a result of the owl nest box monitoring. Andrew has erected quite a number of boxes for Pied Flycatchers in Cumbria where he currently resides, which accounted for the record year for Pied Flycatchers.

Nest Records 2024							
Species	Nests	Average number of eggs	Average Number of chicks	Average Visits per nest	Outcome Percentages

Grand Total	439						

A RSPB scheme involves taking Red Kite chicks from nests in the East Midlands and taking them to Spain. This year Alan accompanied the team in Lincolnshire to ring the single chick being left in each nest, which accounts for the Red Kite chicks (and single Buzzard chick) ringed this year.

Owl and Kestrel nesting data – 2024 and last five years

Review of the year 2024

A total of 5700 birds of 68 species were ringed in 2024., which is about average for recent years. One 'new' species for the group was ringed this year when a juvenile Barred Warbler was caught at Anderby Creek on 31st August, the first one reported on the UK mainland in 2024. Alan made a determined effort to catch Moorhen at Marston STW as part of a national colour ringing project which resulted in our higest ever total for Moorhen with 21 ringed. Water Rails were also caught in the same traps resulting in our highest ever annual total for Water Rail with 17 ringed. It was also a record year for Pied Flycatchers as a result of Andrew's nest box scheme in Cumbria where he now lives. It was our equal best year for Peregrine with 13 ringed, and our second best years for Kestrel (334) and Siskin (708). Other highlights included three Common Redpoll at Bourne Wood, a Teal, Stonechat, Bearded Tit and a 'Siberian' Chiffchaff at Marston and a most unexpected Firecrest at Dunsby on the last ringing session of 2024.

On the downside it was the first ever year (since 1977) that we did not ring any Tree Sparrows. In addition, House Sparrows seem scarce these days and Steve ringed 16 of these in Northumberland out of the annual total of 20. It was the lowest total for Little Owl since the Partnership was formed in 2012, despite Bob continuing to maintain and provide new nest boxes for them, and they are now in serious decline throughout the UK.

January - March

As usual, most ringing was carried out a baited sites. It was quite poor at our farmland sites, mainly due to wet and windy weather, though there seemed to be fewer birds around than normal. This may also have been due to milder weather resulting in less birds such as Yellowhammers and Reed Buntings coming to seed. However there were some Bramblings around with the Chaffinches, Greenfinches and Goldfinches.

Brambling – Dunsby Fen

A reasonable number of Lesser Redpolls (above Left) were present in Bourne Wood and in March we ringed three rarer Common Redpolls (above Right). Despite the name, Common Redpolls are quite rare and we are lucky to get more than one per year.

However the real 'stars' of the late winter period were the increasing number of Siskins in Bourne Wood and we caught over 700. Numbers of Siskin vary from year to year and in some years we get none, but this was the second time we have ringed more than 700 in a year. They are excellent for recoveries as they come down to bird feeders particularly for sunflower hearts. They don't breed in our area, so birds that we catch are from further north and they don't follow any migration routes, going sometimes south-east to winter in eastern and southern Europe, and in other years head south-west into southern UK. This means that we get a lot of movements to and from Scotland in particular, but also throughout Europe. In March we caught one bird having been ringed in Latvia and another in Italy. We also have one of these Siskins subsequently controlled in Norway and another in Kaliningrad, Russia.

April to June

Some 80+ Siskins were ringed at Bourne Wood before they departed northwards with the last ringed there on 10th, and Steve ringed the last of the year in his garden in Northumberland on 14th. From mid April, the focus was then on the nestboxes, beginning with the Little Owls and Tawny Owls before moving on to Barn Owls and Kestrels. Little Owls continue to decline and we seemed to have lost a few pairs at some sites where they have been present for over 20 years. Tawny Owls also did not do very well and it may be as a result of the very wet weather in winter and spring that must have had an effect on the field vole population. Barn Owls seemed to be good in terms of site occupancy, but brood sizes were poor suggesting poor prey availability.

The Little Egret colony at Dyson Farming's Leadenhall Farm site was badly affected by the unseasonal wet weather in early May and many nests contained dead chicks or were empty when the site was visited in late May. Only three chicks were colour-ringed this year. Four broods of Peregrines were colour-ringed plus one following a 'Failed first flight' below a electricity transmission pylon and another which was found nesting in a straw stack! Colour-ringing of both Peregrines and Little Egrets is very successful at increasing the subsequent reporting rate. Of ten recoveries of peregrines this year, nine were due to colour-ring sightings (see the recoveries section on page 33 of this report.)

Having not ringed any Red Kite chicks since 2019, we got the chance to ring a few this year. Currently there is a RSPB scheme to take nestling Kites from nests in the East Midlands and to take them to Spain to increase the population there. Only part broods are taken and we had the opportunity to ring those chicks that were returned to the nest. A lone Buzzard chick was also ringed on the same day.

Andrew had further success this year in May and June with his Pied Flycatcher nest-boxes near where he now lives in Cumbria, with 57 chicks and two adults ringed in eleven occupied boxes. (See page 14 of this report)

July – September

Kestrels were very spread on their laying dates this year, with some very early first broods fledging at the end of May and the latest brood fledged in the first few days of August. This gave an opportunity to Greg Conway and Hugh Hamner from the BTO to GPS tag a couple of our Kestrels as they have been unable to tag as many as they had intended to in Norfolk. It is hoped that the results will be included in next year's report.

GPS tags added to juvenile, adult male and adult female Kestrels – July 2024

Two hundred Reed Warblers and just shy of a hundred Sedge Warblers were ringed in the wet reed-bed at Marston during the autumn, more than last year when the reed-bed was allowed to dry out. However numbers of Chiffchaff and especially Blackcaps were down on previous years.

Bob and Alan did a couple of sessions ringing Sand Martins at an artificial site at Deeping Lakes and over a hundred were ringed with a couple of controls. Bob is hoping to get a couple of similar artificial Sand Martin banks constructed over the winter with the Drainage Boards which is encouraging. After last year's blank year for House Martins it was good to ring 55 at the colony at Pasture Hill Farm near Bourne, and another 103 were ringed at Marston in August.

Fifty Swallows were ringed at Marston STW in August with a dozen Sand Martins adjacent to the wet reed-bed. A couple of evening sessions at Marston produced another fifty or so Swallows with a couple of Sand Martins coming into a small roost. A surprise catch one evening was this juvenile female Teal....the first duck of any species ringed by the group for five years!

It was a good year for hirundines with 366 ringed after a few lean years with 16 last year and 25 the year before

The coast was very disappointing in the autumn and three visits resulted in a total of just 55 birds were ringed, but included the only three Lesser Whitethroats and two of the three Garden Warblers for the year. Star bird however was a juvenile Barred Warbler on 31st August, the very first bird ringed there in 2024! This was the first recorded Barred Warbler on the UK mainland in the autumn, and was a 'new' bird for the group.

October - December

Most ringing late in the year was carried out at Marston STW and Bourne Wood. It seems to have been a good breeding year for the tit species and these at Bourne Wood made up for most of the total ringed in the last three months. Some days were very 'busy' and on 4th October 239 birds were ringed and another 13 retrapped at Bourne Wood....a record total for the wood, leading to a few sore fingers!).

At Marston STW, a continuous effort was made to trap Moorhen for colour-ringing and Water Rails using a variety of baits; wild Mirabelle plums were used in September when Moorhens were seen to be actively feeding on these in the hedgerow. Other fruit that seemed to work were apples, over-ripe peaches and bananas. Otherwise left-over BBQ Spare Ribs, fish and chips worked just as well!. We finished the year with 21 Moorhen and 17 Water Rails, our record year for both species. In future, we won't be using tins of sardines/pilchards for baiting the potter-traps, but just kitchen scraps.

Regular ringing at Marston did also produce a few "goodies" during October in the form of Stonechat (9th for Marston), Bearded Tit (6th for Marston) and the *tristis* race of chiffchaff or 'Siberian' Chiffchaff (2nd for both Marston and the Group)

All in all, it was a fairly typical year with 5,700 birds ringed of 68 species and we look forward to what 2025 will bring. Whilst our regular monitoring work tend to produce few surprise, one never knows what might turn up as clearly demonstrated by this unexpected Firecrest at Dunsby STW on the very last ringing outing of 2024!

Pied Flycatchers in 2024

Up to the end of 2022, we had ringed 75 Pied Flycatchers, mainly at coastal sites on autumn passage with just five in spring. Inland one was ringed in August 1991 at Ancaster and one in May 2005 at Haverholme Park. Andrew had some success when he moved to Windermere and installed some boxes in 2023, and ringed 15 last year. The landowner was that impressed that he bought a number of new nest boxes which were installed for the 2024 season.

This year Andrew had 11 nests of Pied Flycatchers using his nest-boxes and ringed 57 chicks and two adult females, as well as 99 Blue Tit and 47 Great Tit chicks. This is an excellent result and it's possible that the population will increase in the next few years. To date we have never had any of our Pied Flycatchers recovered, having ringed so few, but it is hoped that we could get our first recovery with the increased numbers from Andrew's scheme. It is also great news to be able to submit records to the BTO's Nest Record Scheme for the first time.

Colour-ringing of Moorhens at Marston STW in 2024

Aurora, a PhD student at the University of Gloucester began a colour-ringing project on Moorhen in 2023. After a request for UK ringers to assist, I contacted her stating that although we only ring two or three a year, we would colour ring them if she wanted. In her reply she asked if we could aim for ten. (little did I know that we would double what I thought was an ambitious target!) The rings arrived on 29th January and the following day I set five potter traps when ringing at Marston and caught our first Moorhen, an adult female, that was ringed with a BTO metal ring on the left leg and a orange colour ring with the letters "J60" on the right leg. It was obviously 'beginners luck' as no more were caught in the first half of the year. This first bird was spotted by local birder, Dave Roberts, who was quite disappointed to learn that this Moorhen had travelled just a few yards!

However, when ringing commenced in Plot 3 (the main reedbed) for warblers at the end of July, traps were again set and we ringed another twenty Moorhens by the end of the year. One juvenile was judged too small to colour ring, although it was fitted with a BTO ring. This increased effort to target Moorhen this year resulted in the group's record annual total for Moorhen with 21 ringed. Around 250 are ringed annually in the UK, so pleased that we ringed nearly 10% of the annual total. In addition we also ringed our record total of 17 Water Rails whilst targeting Moorhen. Only around a hundred Water Rails are ringed in the UK annually, so our Water Rail total is approaching 20% of the UK annual total, a remarkable achievement.

Grantham Peregrine Saga 2024

Peregrines first nested at St Wulfram's church in 2007, laying just two eggs and possibly rearing one chick. Bob provided a nest tray on the west side for them the following year, but they did not nest again until 2009 and then used the tray annually up until 2012, fledgling ten young during this period. They failed to nest in 2013 and works on the spire prevented any attempts in 2014 and 2015. A couple of failed attempts have been made since (2018 and 2020). In 2021 two excellent Hik Cameras were installed with help from Chris Skipper and Zoe Smith from Cromer, and funded by the Lincolnshire Bird Club. Unfortunately the Peregrines have not bred since these cameras were installed.

However, these Hik cameras provided plenty of entertainment during the year, despite the fact that the Peregrines failed to breed. The two cameras at opposite corners of the walkway, that can be panned, zoomed and focussed remotely using the Hik app software via a mobile phone. The cameras can therefore cover all four walkways, camera 1 for the west and north walkway and camera 2 for the south and east walkway. The covered nest tray is on the eastern walkway.

Peregrines failed to breed at St Wulfram's Church in 2024, probably due to disturbance by visiting intruding Peregrines. At least NINE different birds were recorded, but there may have been more, as un-ringed birds are difficult to tell apart. There were four colour-ringed birds, one hybrid female and at least two un-ringed males and two un-ringed females. What turned out to be our 'regular' male is colour-ringed (orange ring with "VAF") and was ringed in 2022 by us at Bottesford Church, approximately 11 km to the west-north-west. At just two years old he may not have been mature enough to help 'defend' the site from visiting Peregrines, undoubtedly one of the reasons why they failed to breed. As he will be three years old and seems to be well settled with an un-ringed female, it is hoped that they will breed successfully in 2025

The different birds are documented below:-

Bird	Age	Sex	Identifier	Dates
A	Adult	F	Un-ringed	This seems to be the regular female
B	Adult	F	Un-ringed	Two u/r females seen Feb 24 th
C	Adult	F	Hybrid ?	Seen once - Feb 20 th
D	Adult	F	Blue "MK"	Mar 29 th - Apr 3 rd
E	Adult	F	Yellow "YAB"	May 15 th – June 2 nd
F	1 st Yr	F	Un-ringed	April 26 th and May 17 th
G	Adult	M	Un-ringed	Feb 12 th – Mar 15 th
H	Adult	M	Orange "VAF"	The regular male Feb 12 th – December
I	1st Yr	M	Orange "V7D"	Seen once – Mar 28 th

There was a prolonged fight between an un-ringed female and the blue colour-ringed "MK" on 3rd April, during which an egg was laid/ejected from the un-ringed bird. This would seem to suggest that the un-ringed female would have bred at St Wulfram's, had the fight not occurred. The fight was brutal, starting off on the west walkway before recommencing on the nest tray; the second fight lasted 20+ minutes! Blue "MK" was clearly injured during the fight and was picked up by a member of the public in Grantham a few days later, taken into care for 24 hours and released, but she was not seen on the church again.

<p>G</p> <p>H</p>	<p>This image was taken on February 12th and initially we thought it was a pair. It is clearly an un-ringed male on the nest tray roof. What appeared to be a colour-ringed female on the parapet wall, but this turned out to be orange "VAF" and was later identified as a male. It just looked big being very close to the camera. Orange VAF seemed to disappear for most of March, but then became the most regular of our birds, being present right through April and May and to the end of the year.</p>
<p>Feb 12th – two males</p>	

<p>A/B</p>	<p>During the last half of February, we regularly saw an un-ringed female, seemingly being courted by both an un-ringed male and male VAF.</p> <p>On 24th February, there was a stand-off between two un-ringed females. We were not able to distinguish between the two when seen separately.</p>
<p>Feb 24th Two un-ringed females</p>	

<p>H</p>	<p>Orange colour-ringed "VAF" was our most regular bird of 2024. He was ringed by us at Bottesford Church in 2022. First seen on February 12th squaring up against another male, (un-ringed) he seemed to disappear for much of March, but was then present for the whole of April to the end of the year.</p> <p>He did most of the nest-scraping during the year, and was continuing to nest-scrape during October to December</p> <p>Hopefully he will be more mature in 2025 and more likely to help 'defend' the site against unwelcome Peregrine intruders.</p>
<p>April 27th - VAF</p>	

February 20th Possible hybrid female

During the afternoon of February 20th, a large female visited the nest tray. Our 'regular' female was clearly scared by this bird. We posted the left-hand photograph above on the national Peregrine WhatsApp Group where several group members questioned its ancestry stating that it showed some Gyr and/or Lanner characteristics. The right-hand photograph reinforces that view and the consensus was that it was a Gyr X Peregrine hybrid. Such hybrids are common in the captive bird population, but a captive bird would almost certainly be ringed. Such hybrids have caused problems at a couple of sites in the UK previously (as they are capable of killing true Peregrines) and licences have been issued to shoot them. However previous observed hybrids have all been ringed, and their captive origin known. Fortunately, this bird was only seen on this one occasion and has not been seen since.

Just after mid-day on 28th March a juvenile male landed on the north wall with prey, which it ate before flying off. This bird was wearing an orange colour ring with the letters "V7D". This had been ringed by us last year at Bottesford church a movement of approximately 11 kilometres ESE. This is the first sighting of "V7D" since fledging and was not seen again at St Wulfram's Church after this unexpected visit. It is likely that this bird is a brother of our regular male "VAF" and a year younger.

March 28th – North Wall – First Year Male

On 29th March a new female was seen that was colour ringed with a blue colour ring. Over the next few days, it became apparent that the blue colour ring had the letters "MK". This bird had been ringed as a chick in 2020 in Taunton, Devon. She appeared to be slightly larger than our 'resident' female, and our resident female seemed to be quite scared of it. She was observed a few times nest-scraping, so she may have been trying to oust our resident female. She was involved in a big fight with our resident female on 3rd April, during which she was injured and not seen at St Wulfram's again.

March 29th - Blue "MK"

The Big Fight - April 3rd

On the morning of 3rd April, Elaine, the church administrator, noticed a fight ongoing above the west door as she entered the church. She panned the NW camera round which revealed two females fighting (whilst the male initially just stood on the wall above and watched!). This initial round of the fight lasted at least 15 minutes. The birds then separated and the female Blue "MK" ran round the parapet and stood on the nest tray, panting and with a few feathers ruffled.

However, the other female then appeared behind the tray clearly looking for further battle....

A dishevelled-looking Blue "MK"

"Our" female re-appears looking for further fight

This second round of fighting was brutal

The Big Fight part 2

Unfortunately, during this second round of fighting an egg was ejected by the un-ringed female, clearly showing she would have laid an egg within the next few days.

The fight was brutal, with both birds locked in combat for quite long periods. At least it gave an unusual photo to confirm the combination of "MK" on the blue colour ring.

Following this second fight, Blue MK ran round to the west parapet and was unable to fly up to the wall. She was picked up a day or so later in Grantham and rehabilitated locally and released a few days later nearby, but was not subsequently seen at St Wulfram's.

Egg ejected during the fight

The fight was brutal and lasted 20 minutes

Blue "MK" 's talons on our regular female's head

An unusual view of the blue colour-ring "MK" !

The fight was certainly a "no-holds-barred" fight.

	<p>Early afternoon on April 26th, Bob spotted this really smart first year un-ringed female on the west wall. First year birds can easily be identified by streaked rather than barred underparts and the brown, rather than grey, feathers on the back and wings having buff edges.</p> <p>It was only present for a few minutes and flew off within seconds of the camera being zoomed in for this photo (just before being able to sharpen the focussing!).</p> <p>This bird was only seen once more when it visited the nest tray on the east side on May 17th.</p>
<i>April 26th – west wall – First year Female</i>	

	<p>This bird appeared in the nest tray on 17th May, it seems to be the same bird as on the west wall on April 26th above – see plumage detail highlighted.</p>
<i>May 17th - first year female</i>	

	<p>Late on 15th May Bob spotted a new bird with a yellow colour-ring on the nest tray, but we were unable to make out the colour ring details. Camera was zoomed in to the tray in the hope of it coming back, which it did early on May 16th confirming a yellow colour-ring with "YAB". This bird had been a rescued fledgling female found on the streets in Hull on 19/06/2020, rehabilitated and quickly released three days later at the site it was thought to have originated; a pylon at Kingswood, Hull, where it was immediately joined by what was believed to be her parents. There was then some interaction between this bird and our new resident male, orange "VAF" with both birds seen 'scraping' in the tray.</p>
<i>May 15th – Yellow "YAB"</i>	

Our regular un-ringed female Peregrine sheltering from the hottest day of the year in July at the far end of the northern parapet, shows just how good these HIK cameras are.

October 2024 – West Parapet

November 2024 – nest tray on east side

For the last half of the year, we appear to have a well-settled pair, comprising an un-ringed female and the male orange “VAF”. They were even displaying and scraping in the nest tray during the mild weather in November and December. Hopefully these are good signs for 2025!

Recoveries received during 2024

The partnership received details of 52 recoveries ringed by group members during 2024, with another 31 birds ringed elsewhere and subsequently caught/found. As usual, a good proportion of these (26) were Barn Owls which have a high reporting rate by members of the public. Highlights included one of our Barn Owls retrapped nearly 17 years after ringing which set a new British longevity record. Other highlights included Sedge Warblers to Spain and the Channel Islands, and delayed report of a Chiffchaff to Portugal. The Siskin invasion in the early part of the year included birds from Latvia and Italy and subsequent movements from Bourne Wood to Norway and Russia. The full details follow, and include some retraps where the age of the bird is considered noteworthy.

Ringing/Finding Details of Bird Movements in 2024

Ringing details are given on the first line and recovery data on the second or subsequent lines. The first line entry is normally, ring number followed by an age code, date of ringing and place of ringing.

On the next line, or subsequent lines where reported more than once, there is a code for the manner of recovery (if known) followed by date and place of recovery.

The distance that the bird has moved (if any) is given in kilometres and the direction of movement is shown as sixteenth points of the compass (N, NNE, NE, ENE, E etc.). This is followed by the time elapsed between ringing and recovery in years and days.

The age code is given according to the 'Euring' code and do not represent the age in years, but are as follows:-

odd number = bird of known age

even number = exact age not known

1 = pullus, nestling or chick

2 = full grown, but exact age unknown

3 = Hatched during current year

4 = at least one year old

5 = hatched during last year

6 = at least two years old

M = Male F = Female J = still in juvenile plumage

R/C = Retrapped or controlled (Rb/Cb found breeding)

VV = Ring number read in field

S = Identified from sighting colour-marks (colour rings, wing-tags or neck collars)

X = Found dead (Xf = freshly dead, XI = long dead, Xy = Dying)

Xr = Road Casualty,

Xo = overhead wires,

Xw = hit window,

Xd = drowned,

Xb = entered building,

Xp = taken by bird of prey

+ = Shot

? = unknown circumstances

A = Found alive (includes sick where fate unknown)

The initials of the group member is included for either the bird being ringed or processed by a B&B Partnership member and the entry appears in normal type.

Ringing information of controls and finding information if not made by us appears in italics

Little Egret

J31686	C	24/03/24	RS Bourne Wood, Lincolnshire	(1432 km, WSW, 1 yr 216 days)
<i>S592818</i>	<i>5F</i>	<i>30/01/23</i>	<i>Broomhill Grange Edwinstowe, Nottinghamshire</i>	
	<i>C=M 16/02/24</i>	RS Bourne Wood, Lincolnshire		(66 km, SE, 1 yr 17 days)

A really good set of movements as a result of a good influx of Siskins to Bourne Wood last in the early part of 2024. The Latvian ringed Siskin is our first from Latvia, whilst the Italian ringed one is the first of any species we have caught from Italy, but unfortunately we are still awaiting the original ringing details. Siskins from Scandinavia are known to winter in different areas in subsequent winters, sometimes going into Eastern Europe and then going south-west into the UK in the next winter and vice versa. Previously we have had one Siskin from the Czech Republic, one from Switzerland and one of our Siskins was subsequently found in Slovakia.

Acknowledgements.

We would particularly like to thank the various site owners for continued permission to carry out general ringing activities on their land, including:-

Dyson Farming for their substantial nest box scheme across Lincolnshire, as well as passerine ringing sites on their wild bird cover crops and to the copious supply of wild bird seed.

Anglian Water staff including their Biodiversity Manager, Mike Drew and Site Manager, Alan Bee (now Chris Rydealgh following Alan's retirement in March) for Marston Sewage treatment Works.

We also thank Hugh Dorrington at Aveland Trees, Dunsby and also for around the STW at Dunsby village. Ben and Heather Atkinson for the baited Stewardship site on Dunsby Fen and wild bird seed, and to Daniel King for access to his House Martin colony at Pasture Hill Farm.

Forest Enterprise for Bourne, Twyford and Temple Woods for general ringing and their other woods for Bob's Tawny Owl nest-box schemes,

Matthew Davey and Lincolnshire County Council for the dunes at Anderby Creek.

We thank Mr John Fowkes for access to woodland and bird-boxes in Hawkshead, Cumbria.

We would like to thank the Forest Enterprise ranger, Willie McLaughlin, for his time and effort put in to locate breeding Red Kites, Buzzards and Ravens, and for accompanying Bob checking Tawny Owl boxes.

We thank all the staff and local people at St Wulfram's Church at Grantham, St Mary's Church at Bottesford, St Botolph's Church (The Stump) at Boston, St James' Church at Louth and, St Peter's Church at Yaxley for our Peregrine nest-trays, and to John Topps and Keith Waterfall for monitoring Bottesford, Geoff Mullet for monitoring Louth, and Elaine Chambers at Grantham. We thank British Telecom for our Peregrine nest-tray on the Temple Wood transmitter tower and providing their riggers for accessing the Peregrine tray and the Raven nests both there and at the Carlton Scoop transmitter Tower for us.

We would like to thank many people who are associated with the Barn Owl monitoring, particularly Colin and Val Shawyer, for their continued expert help and advice throughout the year.

The continued interest and assistance of David Moor (A M Borrill), John Sykes, John Lord, Paul Holmes, Jonathan Fowler, J. E. Piccavers, A .H. Worths, Grants Farms, Peter Gilbert, Andrew Farrow, Steve Mitchell (Denton Estates) William Strawson and others for arranging access to Barn Owl boxes that either they have erected themselves, or we have erected with them, is also gratefully acknowledged.

We thank the Environment Agency for their pole-box schemes on the River Ancholme, South Forty-Foot, East and West River Glen, Brant and Upper Witham, the Louth Canal and Donna Nook Re-alignment scheme and to the following drainage boards:-

Black Sluice IDB	Ely IDB	Isle of Axholme IDB	Lindsey Marsh DB
North East Lindsey IDB	North Level IDB	South Holland IDB	Trent Valley IDB
Upper Witham IDB	Witham First IDB	Witham Third IDB	Witham Fourth IDB
Welland & Deepings IDB			

We would particularly like to thank a number of Drainage Board personnel who accompany either Alan or Bob around their boxes including Gary Hunt, Paul Sharman, Huw Sharman, Dean Holland, Nick Downing, Simon Carter, Simon Horton, Adrian Skelton, Tim Smith, Richard Fisher, Darren Scott, Emily Askew, Jess Thomas and various EA personnel.

Thanks are also due to the many other landowners and other individuals, too numerous to mention individually, involved with Kestrel, Barn Owl and Little Owl nest-boxes.
